Kris,

The GIS section in TEDD isn't working. Is there something Janine needs to do to make it work? I thought the services we created for the incident would load in that section. Sam Coleman has this app in his hands and will be showing it off tomorrow morning, let me know what it will take to make this work.

Thanks

The oblique's are in the viewer under the ASPECT service. Also there were no flight paths we added the photos cover area polygon for this flight path that the image service was added for.

I don't want to replace the web link or work on the edit feature until there is a slow down in ops. Tonight most likely. They are using the viewer heavily and I don't want to interrupt that.

I have sent the daily summary report for the 18th to the field for them to review with the OSCs and am waiting to hear back.

That takes care of this list.

Subject: To Do list

-ASPECT flightpaths (tracks)

-Replace web link widget

-Aspect obliques in viewer

-Fix feature editing widget (currently cannot create layers)

-I need to see our daily data summary report.

Thanks
